Rick-

Attached is the Roux Associates presentation from the Oct 5, 2017 Community Liaison Panel meeting that you requested. Also, I have answered the three questions you asked below in red font. Let me know if you have any other questions.

Steve Wright

1) Glencore-Xstrata environmental engineer John Stroiazzo told the panel that removal of spent potliner at the CFAC site would be completed by November 2017. Did that happen? **Yes; shipping of spent potliner from the facility to an out-of-state EPA approved hazardous waste disposal facility was completed in November 2017.**

2) EPA Project Manager Mike Cirian introduced Dick Sloan as the new environmental project manager for the CFAC site. Does Dick Sloan work for the EPA? Did he replace Mike Cirian as the CFAC project manager? **Robert Moler of EPA answered this question. Dick Sloan's email address is rsloan@mt.gov. Robert's email had an error with Dick Sloan's email address.**

3) John Stroiazzo spoke about the removal of some electrical equipment at the CFAC site and the contractor (possibly Calbag) draining oil from the equipment. Was he talking about the high voltage switchyard equipment? **Yes, as well as other electrical transformers located throughout the facility.**

Hello Mr Hanners,

Thank you for your message and questions.

Community Liaison Panel meetings are organized by Ann Green Communication with support from CFAC. Ann Green is the best contact for you to request presentations that were delivered at the last meeting.

Steve Wright is the CFAC project manager on site and is your best contact for updates about issues related to the removal of physical structures or equipment from the site. I have include them on this response and their email addresses are below.

I can answer your question about Dick Sloan. He is the new project manager for the site with the Montana Department of Environmental Quality (DEQ). He is replacing Lisa Dewitt. Mike Cirian remains the EPA project lead for the site. EPA and DEQ work together to oversee the investigation of the site for contamination.

I was not at the last meeting but I can try to track down The EPA toxicologist's presentation in case Ann Green doesn't have it.

Here are Ann Green's and Steve Wright's emails:

agreen@anngreencomm.com

Swright@cfaluminum.com

I hope this helps.

I recently read through the minutes of the Oct. 5, 2017 Columbia Falls Aluminum Company Community Liaison Panel meeting and noticed that it referred to several presentations which were said to be attached to the document. I was unable to find the attachments, so perhaps you could assist me by sending them to me by email.

- 1) A presentation by Susan Griffin of the EPA about the Superfund Risk Assessment Process.
- 2) A presentation by Mike Ritorto of Roux Associates with an update of project activities at the CFAC Superfund site.

In addition, I have a few questions:

- 1) Glencore-Xstrata environmental engineer John Stroiazzo told the panel that removal of spent potliner at the CFAC site would be completed by November 2017. Did that happen?
- 2) EPA Project Manager Mike Cirian introduced Dick Sloan as the new environmental project manager for the CFAC site. Does Dick Sloan work for the EPA? Did he replace Mike Cirian as the CFAC project manager?
- 3) John Stroiazzo spoke about the removal of some electrical equipment at the CFAC site and the contractor (possibly Calbag) draining oil from the equipment. Was he talking about the high voltage switchyard equipment?

Thanks for the help.
